What we provide:

PEIS provides a visual structural integrity inspection. This inspection is not a home inspection but a professional engineering inspection conducted by a board certified engineer. This is not an invasive inspection, no drilling or samples are taken. This is an inspection to determine if differential settlement has occurred and if repair is needed or not on a home. We conduct existing and ongoing residential construction.

Qualifications:

PEIS has six board certified Engineers (four PE's and two EIT's) and a combined experience of nearly 35 years engineering experience. PEIS uniquely has an engineer who is an attorney at law as well as having his LSIT certification.
